

Lifting manoeuvrability and performance to a new high

## Compact trucks round off UniCarriers MX series

**With the MXS3 and MXS4, UniCarriers are expanding their successful MX series of electric counterbalanced trucks with new models that set benchmarks in agility, performance and intelligence. All the new models are characterised by their compact and robust design, excellent manoeuvrability and intelligent control systems. This makes them ideal for dynamic handling tasks in demanding, confined environments.**

The MXS3 line is made up of 3-wheel forklifts with capacities from 1.4 to 2 tonnes, while the 4-wheel forklifts from the MXS4 line have capacities of 1.6 to 2 tonnes. With this expansion, the MX series now covers all categories of logistical tasks, from the MXS all the way to the heavy-duty MXL range. It means that warehouse operators can find a one-stop solution for every application, from a single supplier.

The MXS3 and MSX4 combine the heritage of their award-winning predecessors, the TX3 and TX4, with the advanced technology of the MX series. All systems and components are specified for robustness, ease of maintenance and high operating efficiency, as well as excellent ergonomics.

### **Agile and manoeuvrable, safe and smooth**

With their compact design, amazing manoeuvrability and intelligent control systems, the MXS3 and MXS4 are ideal for handling tasks in cramped, fast-paced environments. The latest steering technology maximises agility and productivity in tight spaces.

Four-wheel steering with +100° rear turning axle provides the MXS4 with smooth and agile manoeuvring, including instant side turns with no pushback. The MXS3 features 360° steering that allows the truck to turn 180° without stopping. The unique UniCarriers S3 – Stability Support System – adapts rapidly to pedal operation, and ensures all movements are smooth. Advanced curve control enables the fastest safe cornering speed in every situation. To ensure safe operation whatever the lift height or load, advanced hydraulics keep load handling steady and precisely controlled.

**A truck for drivers**

The system performance of a truck is defined by the interaction between vehicle and operator, and the MSX3 and MSX4 are both optimally tuned to their driver. Among their most outstanding features is a set of intelligent assistive technologies that ensure maximum driver comfort and safety.

Advanced safety features, ergonomic controls and comfortable working conditions enhance driver confidence, performance and satisfaction. The ProVision design with its unique transparent front panel gives the driver excellent vision in all directions, ensuring safe handling. An advanced full-colour display visualises data to ensure that the driver always has the most important information available at a glance. Spacious operator compartments offer comfort and easy access features for drivers of all sizes, in any of the perfect-fit cabin solutions – including optional cold store modification.

**Suitable for all applications**

Built to cope with the harshest conditions, this truck range is suitable for deployment in food and beverage manufacturing and wholesale, fishing and fish processing, chemicals, textiles or general and refrigerated warehousing and storage, just to name a few examples – or wherever a powerful, intelligent and agile handling solution is required.

The MXS3 and MXS4 are available now from the manufacturer and all UniCarriers dealers.

**About UniCarriers**

UniCarriers is a brand of MLE B.V. UniCarriers design, manufacture, sell and distribute a comprehensive range of high-quality, innovative warehouse equipment and IC/electric counterbalance forklifts. Its versatile, customisable materials handling solutions for logistics and warehousing are produced at the group's production facilities in Sweden, Spain and Finland. Its products are sold directly to end customers by an experienced team of sales experts. Its main customers are involved in the manufacture and distribution of food, warehousing for raw material and finished goods, product flow through manufacture and operations with other specialist handling needs. UniCarriers heritage includes leading companies such as Nissan Forklift, TCM and Atlet. Since April 2020, UniCarriers Europe has integrated its operations into the MLE organization, part of the Japanese Logisnext Group (a MHI company). The MLE group covers the markets in Europe, CIS, Middle East and Africa with its own subsidiaries in 10 countries as well as independent dealer networks. The group's production and development sites are located in Finland, Spain and Sweden. With 12,000 employees and total sales of around 448,918 million yen (As of March 2020), ML is the world's fourth-largest industrial truck manufacturer.
